

The Float Cash Flow Quiz

Your challenge, should you choose to accept it, is to produce a quiz game.

The questions are multiple choice, with four options scored as follows —

First option:	15 points	Second option:	10 points
Third option:	5 points	Fourth option:	0 points

The quiz should be written in React and Redux and the questions should be provided by Rails.

Download the questions in CSV format here: <http://git.io/vu6x8>

Please get in touch if you have any questions or feedback.

All the best!

The Game

A browser window titled "Cash Flow Quiz" with the URL "http://example.com/quiz". The page displays "Welcome to the Cash Flow Quiz!" and "What is your name?". A text input field contains the name "John". Below the input is a "Next" button.

A browser window titled "Question 1" with the URL "http://example.com/questions/1". The page shows "Points so far: 10" and the question "How do you manage your books?". There are four radio button options: "Online accounting software", "Desktop accounting software", "Spreadsheets (love them formulas!)", and "Books? You mean like Harry Potter?". A "Next" button is at the bottom.

A browser window titled "Finished!" with the URL "http://example.com/results". The page displays "Thank you John!" and "You scored 45 points out of a possible 150 in our cash flow quiz". A "Try Again" button is at the bottom.
